HIV Surveillance by Race/Ethnicity
Diagnoses of HIV Infection among Adults and Adolescents, by Race/Ethnicity, 2010–2014—United States and 6 Dependent Areas

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. All displayed data have been statistically adjusted to account for reporting delays, but not for incomplete reporting.

Hispanics/Latinos can be of any race.
Rates of Diagnoses of HIV Infection among Adults and Adolescents, by Race/Ethnicity 2010–2014—United States

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. All displayed data have been statistically adjusted to account for reporting delays, but not for incomplete reporting.

Hispanics/Latinos can be of any race.
HIV Infection in Blacks/African Americans
United States and 6 Dependent Areas

Total 222,185 diagnoses of HIV infection in 2010–2014

- Blacks/African Americans: 45% of total
- Black/African American women: 62% of women
- Blacks/African Americans: 64% of infections attributed to heterosexual contact\(^a\)
- Black/African American children: 64% of children aged <13 years

In 2014, 44% of diagnoses of HIV infection among adults and adolescents were in blacks/African Americans.

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. All displayed data have been statistically adjusted to account for reporting delays and missing transmission category, but not for incomplete reporting.

\(^a\) Heterosexual contact with a person known to have, or to be at high risk for, HIV infection.
HIV Infection in Hispanics/Latinos
United States and 6 Dependent Areas

Total 222,185 diagnoses of HIV infection from 2010–2014

- Hispanics/Latinos: 23% of total
- Hispanic/Latino women: 17% of women
- Hispanics/Latinos: 18% of infections attributed to heterosexual contact\(^a\)
- Hispanic/Latino children: 11% of children aged <13 years

In 2014, 24% of diagnoses of HIV infection among adults and adolescents were in Hispanics/Latinos.

Note. Data include persons with a diagnosis of HIV infection regardless of stage of disease at diagnosis. All displayed data have been statistically adjusted to account for reporting delays and missing transmission category, but not for incomplete reporting
\(^a\) Hispanics/Latinos can be of any race.
\(^b\) Heterosexual contact with a person known to have, or to be at high risk for, HIV infection.
Diagnoses of HIV Infection and Population by Race/Ethnicity, 2014—United States

Diagnoses of HIV infection
N = 44,073
